

## Editor's Profile

**Michael Hall** was born in 1953, raised in Grants Pass, Oregon, a little town striding the great and intermittently impetuous Rogue River. He graduated Grants Pass High School with a healthy GPA, enjoying the math and science programs made available there, due mostly to wonderful teaching. He was able to save for College tuition and studied at Southern Oregon College in Ashland, Oregon. He majored in Biology with the idea of becoming a Marine Biologist. However, the military selective service "encouraged" him to sign up for a term in the USN. After serving in the Navy, he travelled to the Grand Canyon, staying on as a tour guide. He marveled under its starry sky, nightly. Thereafter, he began to read everything he could on the subject of astronomy and physics. Although he had no formal training on these matters, he had a great love for them. He was convinced that the explicable and stable laws that govern all things, the constants that make possible an anthrop universe, need further study. He discovered that Professor Kadakia's work is uncovering a bit more of its truth, and he is happy to contribute towards the success of book project as an editor.
